

MRM MiniReflektorMatt

GLARE-FREE ELEGANCE  
Recessed and surface-mounted  
luminaires with MRM optics

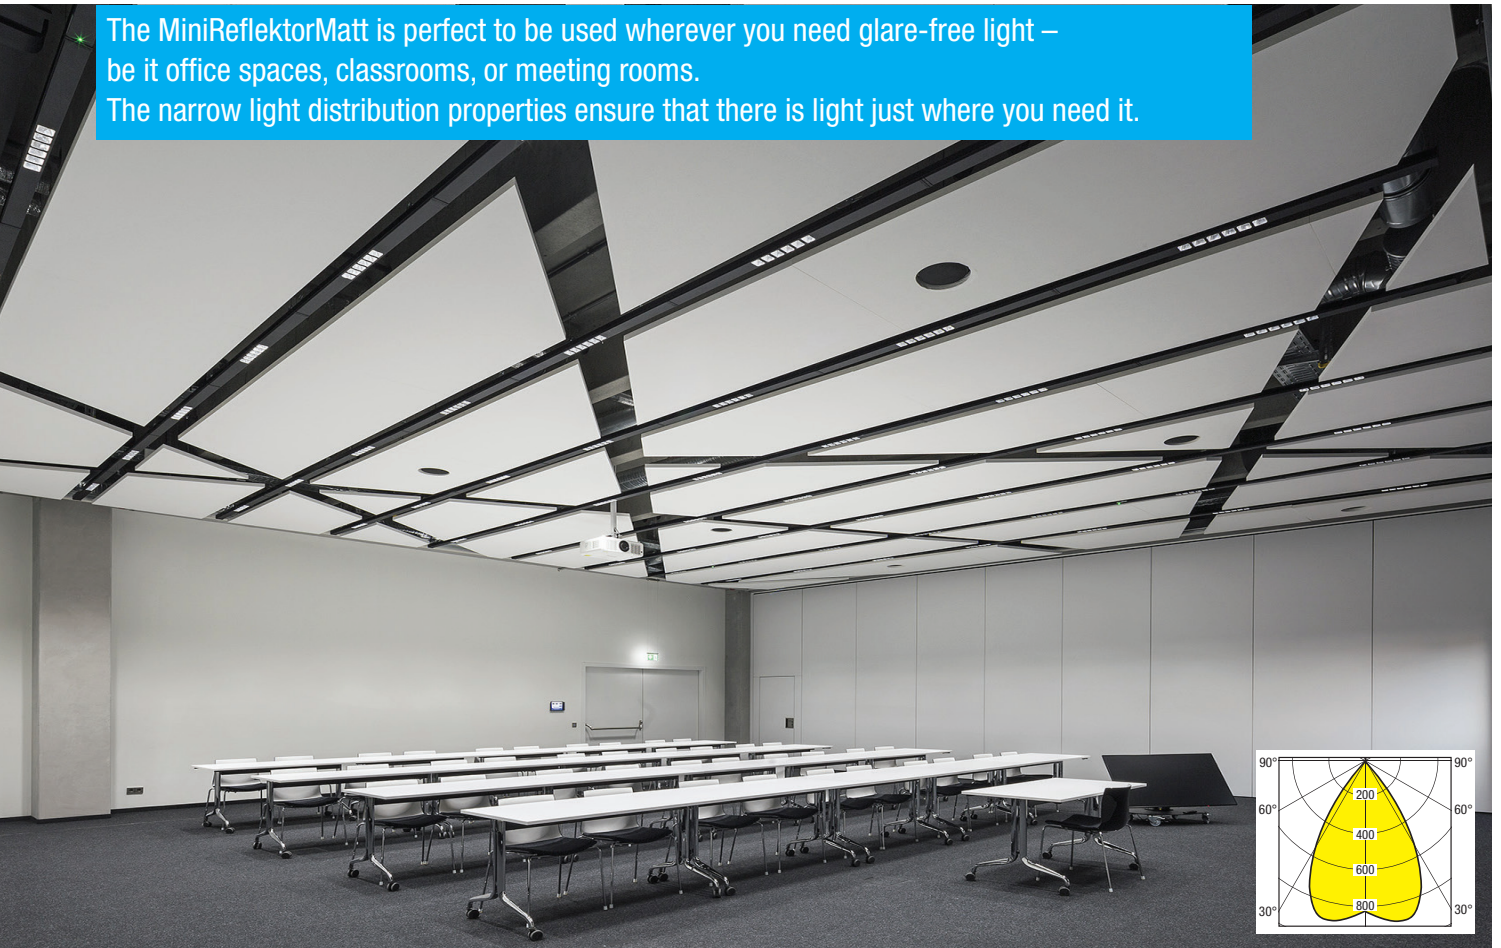

**RIDI**

# MiniReflektorMatt

New lighting multi-tool

The MiniReflektorMatt is perfect to be used wherever you need glare-free light – be it office spaces, classrooms, or meeting rooms. The narrow light distribution properties ensure that there is light just where you need it.

MiniReflektorMatt in RIDI LINIA, black. RIDI Group Campus.

**The MiniReflektorMatt is the latest lighting multi-tool by RIDI that perfectly complements the driver@optic® range. MRM – made in Germany, and in addition to the LENSES family– is a perfect high-quality product series to be added to the office range.**

The MiniReflectors' compact dimension mean that you can also use this solution for a width of 115 mm, enabling glare-free elegance in a compact design both for new installations and refurbishments.

This makes the system interesting for cut ceilings and recessed mounting, but also for M100/150/200 metal panel ceilings and in ceilings with asymmetrical panels and profiles.

For surface-mounted ceiling solutions, the housings come already optimised to match the old dimensions of the ABR range. When using the existing fixing points, the slightly larger size of the housing allows for a cost-effective 1:1 replacement.

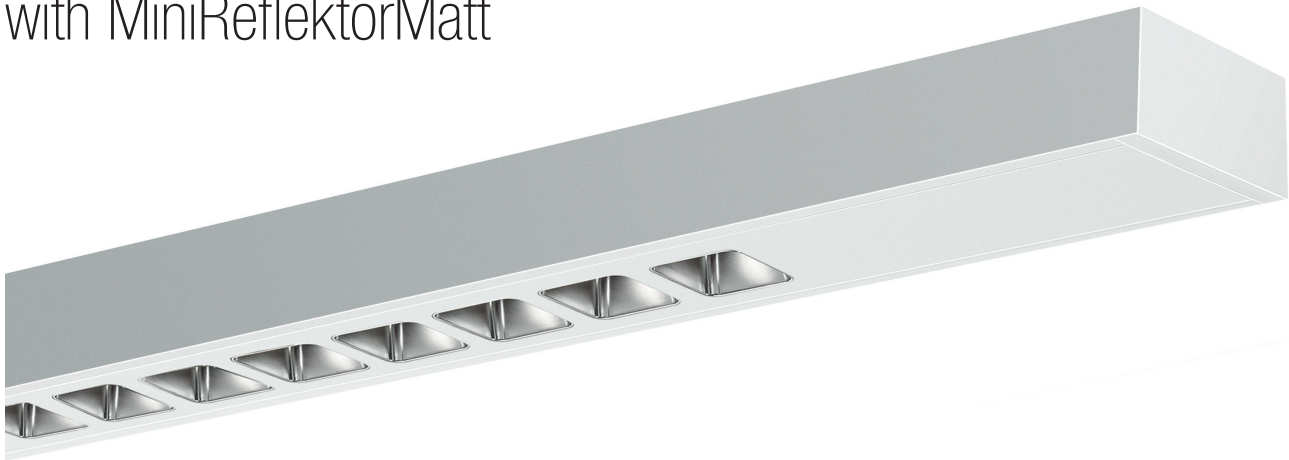

Slightly more compact attachment variants are still available for new installations.

**All RIDI products are sustainable and designed to make them easy to install. With the driver@optic® principle, all the electronics are located on the luminaire panel. The sheet metal housings are easy to pre-mount; the actual luminaire can be installed at a later date.**

**Subsequent exchanges are easy to carry out.**

# Integrated sensor technology

## Simple lighting control APCON®

The EL range in combination with the MiniReflektorMatt's lighting technology are rounded off thanks to additional features that create a practical and contemporary lighting tool.

**Thanks to APCON® EASY, the solution for wireless lighting control is already integrated. These luminaires feature daylight-dependent brightness as well as an occupancy sensor, making a valuable contribution to energy saving. This is a Plug & Play solution to allow for quick commissioning and wireless networking with other luminaires in the room.**

The available high-output models are also the optimum solution for special requirements in terms of higher illuminance levels or very high demands in terms of glare control – and both in one model, easy to adjust using ResFlex technology or DALI controls.

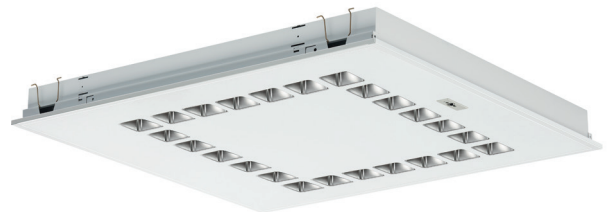

## Additional features

More information on the MiniReflektorMatt: having their own 3-hour individual power supply (ED models), the models are equipped to work even in an emergency.

**The high-output types are real all-rounders – available in dimensions EE and EQ0597/0622.**
